**Professional Engineers  
Ontario**

Authorized by the Association of Professional Engineers  
of Ontario to offer professional engineering services.

## Service and 24/7 HVAC Response to hundreds of clients across Canada for more than 25 years

ARIS brings together HVAC technicians, engineers and industry professionals with a clear understanding of the operation of your facility. ARIS understands your building and has engineers on call 24/7 to respond to any service requirement for your building. Working with our mechanical, electrical and structural engineering teams, we provide highly successful design/build HVAC and energy solutions with state of the art facility automation and monitoring systems.

We understand how your building works and we want to reduce your operating costs. That's how we improve your building with our Innovation and Experience.

ARIS offers Preventive Maintenance Service Agreements for all brands of rooftops, chillers, boilers, compressors, air-handler, cooling towers, pumps, variable speed drives, controls and accessories. Each agreement is tailored to meet the budget and operating needs of your facility and can include both preventive maintenance to keep your equipment running in peak condition and predictive maintenance services to identify potential problems before costly breakdowns occur.

## Engineering plus Construction

Not only do we service your building, we can retrofit it for optimum efficiency.

ARIS is one step above other contractors because we "engineer" a solution with controls and energy solutions for every HVAC application using maximum incentives. Our experienced engineering team assesses your HVAC system requirements and designs the most cost-effective configuration possible. Contractors will cut corner on engineering but ARIS is built on both engineers and technicians to ensure that you have an engineered solution at a competitive price. No other contractor can compete with this ARIS engineering advantage.

## Solar Engineering Professionals

ARIS is designing and installing hundreds of solar PV system in Ontario. Ask your ARIS representative about this opportunity to partner with the sun.

## HVAC and Building Commissioning

ARIS guaranteed performance delivers the comfort you expect at the lowest possible energy cost. We understand the importance of providing great customer service. Our skilled technicians and a fleet of service vehicles ensure fast, dependable and quality service for all clients.

ARIS has been delivering these results to our customers for over 25 years. ARIS provides a variety of Planned Service Programs designed to keep your heating and cooling equipment in top operating condition. HVAC installations will benefit from regularly scheduled service inspections. This will help reduce emergency servicing by exposing potential problems that can be corrected inexpensively prior to costly equipment failures.

Regular system maintenance will also help reduce utility bills by keeping your systems operating at peak efficiency.

## Advanced BACnet Automation Systems

Leverage the expertise of our engineers who have installed hundreds of building automation systems across Canada. Unlike companies that install proprietary systems that lock you into long term service contracts, ARIS uses the BACnet standard in automation that can be accessed by nearly any other service company. Our BACnet automation systems are engineered to maximize the performance and indoor air quality of your building with minimum energy consumption.

This allows our clients to focus on their core business and allocate the much needed resources to the business without compromising the quality, comfort and sustainability of their systems within the facility.

Go green  
and improve your bottom line.

## Our services...

- Facility Maintenance
- 24/7 Emergency Service
- Boilers
- Chillers
- HVAC
- Mechanical
- Electrical
- Lighting
- Retrofit and Re-Commissioning
- Construction
- Water Conservation
- Operating Cost Optimization
- Facility Management
- Solar and Renewable Energy
- Automation and 24 Hour Monitoring

## Monitoring 24/7 to ensure performance and reduced operational costs

Today's building manager requires information that can be easily retrieved and analyzed to make decisions on time and within budgets.

The ARIS 24/7 monitoring program allows our engineers to review your HVAC system and intervene as required in the shortest span of time. This translates to effective response and minimum downtime.

Our Building Automation Systems are programmed to track, trend and log system performances that can be retrieved and analyzed for system faults or human error. Intelligent diagnostics provides a greater accuracy to identify systems deficiencies or potential malfunction before migrating to a catastrophic failure.

As a client you can retrieve years of historical trend logs that clearly graph equipment operation and performance.

The greatest benefit is knowing that your valuable systems are controlled and costs are contained.
